ABSTRACT:

The paper reviews the basic features of the India's input-output tables in order to contribute to the compilation of the 2005 BRICs international input-output table. The review of the history and the presentation format of the India's table revealed that the India's table basically follows the System of National Accounts (SNA) of the United Nations but has peculiar features such as the reference year. For compiling the BRICs table, the special treatments are required especially for (1) reference year, (2) valuation of transactions, and (3) segregation of value added sectors.
