PAPER CONFERENCE CODE: 268

FULL PAPER IN CD?: YES

ABSTRACT:

This paper introduces the features and compilation method of China national input-output (I-O) table. Different from the national benchmark ones, State Information Center (SIC) has updated the non-competitive import type I-O tables for each five-year since 1985 under the support and cooperation with Institute of Developing Economies (IDE), Japan. In 2002, SIC has started to compile China multi-regional I-O table (CMRIO) at 8-region and 30-sector classification for each 5-year. At the same time, SIC has launched a series of projects to study China's economic development based on the I-O technique and data.
